Hose Master engineers high quality metal hose and expansion joint solutions for a wide variety of dry bulk material handling applications. Whether transferring grain, chemical powders, or plastic pellets, we are application experts in bulk material handling. We understand the science behind metal hose technology, so our proprietary manufacturing processes yield products with unmatched quality, safety, and value. Wherever durability, resistance to abrasion, or reduced maintenance costs are important, our products are there to ensure less downtime. Manufacturing and transportation companies trust Hose Master products for their most critical pneumatic conveying applications.
Temperature extremes
If either the substance flowing through the hose or the surrounding atmospheric temperature is very cold or hot, metal may be the only hose material able to withstand the temperature extremes.

Chemical compatibility
Metal hose can handle a wider variety of chemicals than most other hose materials. If the hose will be exposed to aggressive chemicals, either internally or externally, metal hose should be used.

Permeation concerns
When containing the gases inside the hose is important, metal hose is a good choice. While other hose materials may allow gas permeation through the hose wall and into the atmosphere, metal hose, on the other hand, is not susceptible to permeation.

Abrasion and over-bending concerns
To prevent damage caused by abrasion or over-bending, a metal hose can be used as a protective cover over wires or even other hoses.

Potential for catastrophic failure
Non-metal hose types often fail by developing large cracks or suddenly coming apart completely. If a metal hose fails, however, it will typically develop only small holes or cracks. If a sudden hose failure would be catastrophic to your operation, a metal hose may minimize the damage by leaking product at a slower rate.

Fire safety
Other hose types can melt when exposed to fire or high temperatures. Metal hose, however, maintains its integrity to 1200°F and beyond.

Full vacuum applications
Metal hose maintains its shape even under full vacuum – a condition where other hose types may collapse.

Fitting configuration flexibility
Virtually any type of fitting can be attached to metal hose, without the special shanks and collars needed with other types of hose.

Recommendations for using metal hose:

- Powdered cement transfer
- Powdered gypsum transfer
- Chemical powder transfer

Corrugated metal hose
Lined assemblies for abrasive products

Metal expansion joints
Hot air blowers on pneumatic systems
Load cell hopper connections
Paper scrap recovery systems

Stripwound metal hose
Pneumatic plastic pellet transfer systems
Portable grain vacuum systems
Biomass transfer systems
Aggregate transfer in asphalt plants
Powdered cement transfer
Powdered gypsum transfer
Chemical powder transfer

Catalyst transfer
Material loading and unloading
Hot air blower hoses
Rail car loading and unloading
Dry bulk transloading facilities
Barge loading and unloading
Grain transfer

Pigment transfer
Carbon black transfer
Fly ash conveying
Lime injection systems
Dust collection
Wood chip conveying
Sawdust conveying

Full Material Handling applications for Hose Master products:

- Corrugated metal hose
- Lined assemblies for abrasive products
- Metal expansion joints
- Hot air blowers on pneumatic systems
- Load cell hopper connections
- Paper scrap recovery systems
- Stripwound metal hose
- Pneumatic plastic pellet transfer systems
- Portable grain vacuum systems
- Biomass transfer systems
- Aggregate transfer in asphalt plants
- Powdered cement transfer
- Powdered gypsum transfer
- Chemical powder transfer
- Catalyst transfer
- Material loading and unloading
- Hot air blower hoses
- Rail car loading and unloading
- Dry bulk transloading facilities
- Barge loading and unloading
- Grain transfer
- Pigment transfer
- Carbon black transfer
- Fly ash conveying
- Lime injection systems
- Dust collection
- Wood chip conveying
- Sawdust conveying
