TE is a superior lay-flat, potable water hose that is designed to be lightweight and flexible.

Manufactured with NSF Standard 61 approved materials, this extruded polyurethane hose can deliver drinking water, assist as an emergency replacement for damaged hydrant lines and, in the event of a disaster, replace a broke water main.

Offered in a variety of diameters up to 6”, and in typical coupled lengths of 50’ or 100’, TE can be specified in continuous lengths up to 660’.

If you have to move more water more efficiently, Snap-tite Hose has the product to get it done.

**FEATURES AND BENEFITS**

- NSF Standard 61 approved polyurethane is extruded thru-the-weave, which lowers drag force and provides long service life.
- Reinforced woven polyester jacket provides increased puncture resistance.
- Remains flexible from -60°F to 180°F (-51.1°C to 82°C) and resists ozone, oxidation, and most chemical/petroleum products.
- Available with Aluminum or brass NH/NST or IPT threads.
- Manufactured within our ISO-9001:2015 certified quality assurance system.
Designed originally to meet the demanding requirements of the oil and gas fracking industry for transfer of large volumes of water (replacing metal pipe) from reservoirs and optional water supplies to the frack sites, XLF HydroXtreme hose is made to exact specifications for extruded-thru-the-weave polyurethane LDH with superior concentricity of thickness around the circumference for enhanced abrasion, cut and puncture resistance.

Snap-tite Hose was the first “Made in the USA” hose manufacturer to offer large volume water transfer hose to the fracking industry. Today, this polyurethane LDH is the workhorse not only of the oil and gas industry, but, is now used for dewatering in natural disaster areas, construction, slurry transfer in agriculture, nuclear emergency backup supply lines, refineries for tank fire suppression, submerged pump supply, and for sewer/water main by-passes during reconstruction. Battlefield tested and oil-field perfected, the HydroXtreme is purpose built to exceed expectations of today’s industrial application environments.

This one-piece, unified, extruded-thru-the-weave polyurethane designed hose features a woven inner jacket built with 100% high tenacity polyester yarn for strength and durability encapsulated with high-performance, high durometer (toughness), polyurethane outer jacket and inner liner with exact spacing to allow for proper “pillaring” of the polyurethane through-the-weave to ensure no delamination of the hose inner and outer walls.

Gauging is used during continuous length runs to ensure the concentricity of thickness around the circumference of the hose for greater protection against abrasion and puncture under the toughest of field conditions. Equally important is the “normalization” of the hose under steam and pressure to correctly size the ID and OD to set the exact sizing to ensure, tight, leak proof couplings.
**FEATURES AND BENEFITS**

- Versatile, multi-purpose Large Diameter Hose for oil/gas industry water transfer, dewatering, refineries for tank fire supression, nuclear, agriculture, military, and water/sewer by-passes during construction.

- Designed for maximum serviced life, low operating cost, fast deployment/retrieval, ease of storing/transfer, durable and reliable to minimize risk exposure.

- 100% high tenacity polyester yarn inner jacket for strength, extruded thru-the-weave polyurethane one-piece, unified, construction to ensure no delamination and provide abrasion protection. Liner and cover, minimum 3,000 psi tensile strength.

- Chemical resistance for exposure to most hydro-carbons, gasoline, oils, alkalis, and grease with no effect on performance of the hose.

- Hose shows no ozone exposure effect when subjected to testing in accordance with ASTM D1149-64, 100 PPHM /122 degrees F/70 hours.

- Abrasion resistance is 5X that of conventional rubber hose; 750,000 cycles on Taber abrasion test without exposure of the jacket.

- Cover and liner materials are NSF - 61 approved for potable water.

- Made in Union City, Pennsylvania.

**CONSTRUCTION**

Polyurethane Extruded Thru-the-Weave, Polyester Reinforcement

**TEMPERATURE**

-60°F (-51°C) to 180°F (82°C)

**COUPLINGS**

Aluminum couplings extruded from bar stock or billets must be used for high pressure applications. No cast or forged couplings should be used. Couplings must be manufactured in the USA. V-style with Victaulic clamps or Storz with three-segment, double-bolt collars and minimum 4” shank for proper, secure assembly.

**APPROVALS**

High durometer, polyurethane material and colors are approved for NSF 61 requirements for potable water.

**COLORS**

- Black

SNAP-TITE UTX
EXTRA MUSCLE IN FLOW AND SUPPORT

KRYPTONITE (UTX) LDH gives you extra muscle, in flow and support—all in a high-visibility lightweight supply line. A tough polyurethane outer cover combines with an exclusive thru-the-weave liner to offer greater resistance to punctures and abrasion. But it doesn’t stop there. Kryptonite is compact, taking up less room when you pack it, and it’s extremely durable—with higher resistance to oils, chemicals and ozone. UTX is snag proof and kink resistant and will not mildew or rot.

FEATURES AND BENEFITS
Typical rubber extruded fire hose can vary in thickness, becoming bulky and heavy. Kryptonite™ LDH incorporates a circular woven polyester jacket that is completely encapsulated by a special urethane polymer that provides superior abrasion and puncture resistance while remaining extremely light and service worthy.

- Kryptonite™ weighs 20% less than conventional rubber supply hose.
- Reinforced woven polyester jacket provides increased puncture resistance.
- Extruded thru-the-weave polyurethane construction and ultra smooth liner minimizes friction loss.
- Engineered to deliver more flow and more efficient packability.
- Remains flexible to -50°F (-46°C).
- Resists ozone, oxidation and most chemical/petroleum products.
- Made in USA to ISO-9001:2015 certified quality management system.

Part No. Example: UTX50X100G50S = Kryptonite Hose, 5” ID by 100’ Length, Hi-Viz Green, 5” Storz Aluminum Coupling
From fuel transfer to potable water, the TM hose is engineered to military-grade quality standards to perform in the field.

Smarter by design: 100% high tenacity yarn, extruded with thru-the-weave polyurethane creates a strong yet lightweight hose that also resists snaking for superior productivity. The liner and cover rate at minimum 3000psi tensile strength. Also available with an optional encapsulated anti-static discharge wire.

This hose is compatible with the following fuels:
- MIL-DTL-83133 (JP-8) (NATO F-34)
- MIL-DTL-5624 (JP-5) (NATO F-44)
- A-A-52557 (Diesel-military, including NATO F-54)
- ASTM D 975 (Diesel-US commercial)
- MIL-DTL-83133 (NATO F-35)
- ASTM D 1655 (Jet-A-1)
- AFLLLP-3747 (NATO F-24)

**FEATURES AND BENEFITS**
- Ultra-durable: withstands exposure to most hydrocarbons, gasoline, oils, alkalis, and grease with no effect on the performance of the hose.
- Ozone-resistant: shows no visible signs of cracking of the liner or cover when subjected to testing in accordance with ASTM D1149-64, 100 PPHM/122°F/70 hours.
- Rugged: 5x more abrasion resistant than conventional rubber hose.
- Easy handling: lightweight profile and lay-flat design handles easily in both deployment and retrieval.
- Reliable: performs at temperatures ranging from -60°F to 180°F (-51°C to 82°C)
- Designed for maximum service life and low cost of ownership.

*As per NFPA 1961 - the service test pressure is to be 10% greater than the “normal highest operating pressure” at which the hose is expected to be used.*
Snap-tite Hose’s lightweight TS is the dependable, affordable drag hose for everyday sludge and slurry applications. It features 100% high tenacity yarn extruded with thru-the-weave polyurethane creates a strong hose that also resists snaking for excellent flow and superior productivity.

**FEATURES AND BENEFITS**

- Withstands exposure to most hydro-carbons, gasoline, oils, alkalis and grease with no effect on the performance of the hose.
- Shows no visible signs of cracking of the liner or cover when subjected to testing in accordance with ASTM D1149-64, 100 PPHM/122°F/70 hours.
- Five-times more abrasion resistant than conventional rubber hose, making it ideal for all sludge and slurry applications.
- Performance rated at -60°F to 180°F (-51°C to 82°C).
- Designed for maximum service life and low operating cost for greater value.

TSX SLUDGE HOSE

EXTRUDED POLYURETHANE HOSE

Purpose-built to move sludge quickly and efficiently, Snap-tite Hose’s TSX is the industry’s gold standard drag hose that tackles even the most demanding work conditions with ease. The heavy-duty hose features 100% high tenacity yarn with extruded with thru-the-weave polyurethane for extreme durability that also resist snaking for excellent flow and superior productivity. TSX has the highest burst pressure rating shored up with the thickest outer cover in the industry, high-tensile hose wall, for the confidence and reliability you need to get the job done.

FEATURES AND BENEFITS

- Withstands exposure to most hydro-carbons, gasoline, oils, alkalis and grease with no effect on the performance of the hose.
- TSX shows no visible signs of cracking of the liner or cover when subjected to testing in accordance with ATSM D1149-64, 100 PPHM/122°F/70 hours.
- Five-times more abrasion resistant than conventional rubber hose making it ideal for all sludge and slurry applications.
- Performance rated at -60°F to 180°F (-51°C to 82°C).
- NSF standard 61 and potable water approved materials.

IR IRRIGATION HOSE

EXTRUDED POLYURETHANE HOSE

Snap-tite Hose’s IR is the leading irrigation line in the field. Built to last, the rugged IR hose is constructed of 100% high tenacity yarn, extruded with thru-the-weave polyurethane for incredible strength and long-lasting performance. The liner and cover meet minimum 3,000 psi tensile strength.

IR is capable of withstanding exposure to most hydrocarbons, gasoline, oils, alkalis and grease with no effect on performance. It is built for fast deployment and retrieval, saving time and money — and IR is portable, easy to store and has a long service life, delivering performance and exceptional value.

FEATURES AND BENEFITS

- Super-tough and ozone-resistant, IR shows no visible signs of cracking of the inner liner or cover when subjected to testing in accordance with ATSM D1149-64, 100 PPHM/122°F/70 hours.
- Performance rated at -60°F to 180°F (-51°C to 82°C).
- NSF standard 61 and potable water approved materials.
- Designed for maximum service life and low operating cost for greater value.
- Made in the USA to ISO-9001 certified quality management system.

SNAP-TITE ATX
HIGH PRESSURE NITRILE RUBBER
ATTACK/SUPPLY HOSE

Manufactured in a similar process as TPX, ATX utilizes a 3-ply design where the cover and liner are extruded independently and double vulcanized to guarantee a consistent, compact hose wall. The polyester reinforcement can then be woven tighter, making this hose more resistant to puncture while also being easier to pack and store. ATX has a stronger jacket which increases the service test pressure of the Ldh sizes to 300 psi (2070 kpa).

FEATURES AND BENEFITS

- 3-ply rubber municipal fire hose with both the cover and liner made of heavy duty nitrile rubber, high tensile strength tightly woven polyester reinforcement for maximum durability and flexibility.

- Smooth liner keeps friction loss to a minimum.

- Nitrile rubber cover greatly increases abrasion resistance, provides long service life and the tightly woven reinforcement resists puncture.

- Remains flexible to temperatures as low as -20°F (-29°C) and is resistant to ozone, oxidation, and most chemicals and petrochemicals.

- Suitable for pumping sprinklers and standpipes, industrial fire fighting, and supplying aerial devices.

TPX has a unique 3-ply construction that is designed to be consistent and compact.

Traditionally manufactured extruded hose can vary in thickness, becoming bulky and heavy.

TPX utilizes a 3-ply design where the ribbed cover and smooth nitrile liner are extruded independently. The cover is inserted inside the tight-weave reinforcement, vulcanized, then turned "inside-out". The line is then inserted and the hose is vulcanized for a second time to form a bond of all three plies, guaranteeing a consistent, compact hose wall.

Snap-tite Hose thinks durability is of utmost importance. Our hose is designed to withstand a lot so you don’t have to worry. Make sure you choose a hose that has a long service life.
FEATURES AND BENEFITS

- 3-ply rubber fire hose with both the cover and liner made of heavy duty nitrile rubber, high tensile strength tightly woven polyester reinforcement for maximum durability and flexibility.

- Nitrile rubber cover greatly increases abrasion resistance, provides long service life and the tightly woven reinforcement resists puncture.

- Remains flexible to temperatures as low as negative 20 degrees F (-29 degrees C) and is resistant to ozone, oxidation, and most chemicals and petrochemicals.

- Suitable for construction sites, mines, and industrial fire fighting.

- Tighter weave allows for more resistance to puncture while also being easier to pack and store.

SNAP-TITE HFX
EXTRUDED NITRILE RUBBER
ATTACK/SUPPLY HOSE

HFX is a nitrile thru-the-weave, rubber covered fire hose that utilizes both polyester and nylon yarn in the reinforcing jacket. Under pressure, the polyester keeps the hose from “snaking” where the nylon allows for controlled dilation, reducing friction loss and generating higher flow rates. Our special rubber compound provides a tough cover that resists heat, abrasion, snags, and hot embers. The interlocking matrix also means no adhesives are used and there is a permanent bond to all the warp and weft yarns.

FEATURES AND BENEFITS

- Extruded thru-the-weave, nitrile rubber fire hose. The reinforcement is made with a blend of circular woven, twill weave, polyester and nylon fibers.

- The ribs on the cover surface greatly increase abrasion resistance and help provide a long service life.

- Highly resistant to both contact and radiant heat.

- Remains flexible to temperatures as low as -20°F (-29°C) and is resistant to ozone, oxidation, and most chemicals and petrochemicals.

- Suitable for attack, supply, and soft-sleeve suction and relay applications.

- In various diameters up to 6” and in typical coupled lengths of 50’ or 100’ and can be specified in continuous lengths up to 660’ uncoupled.

LD
LIGHTWEIGHT EXTRUDED RUBBER HOSE
LD is a premium quality, nitrile rubber covered fire hose that is manufactured using a unique process which permanently bonds the nylon reinforcement to the nitrile rubber cover/liner. LD is an easily coiled, non-kinking, high flow, lightweight hose that also resists abrasion, chemicals, and weathering by ozone.

FEATURES AND BENEFITS
- Extruded thru-the-weave, nitrile rubber fire hose. The reinforcement is made with circular woven, twill weave, nylon fibers.
- Highly resistant to both contact and radiant heat.
- Designed using an external elastometric coating that provides very low absorption of liquids.
- Hose remains flexible to temperatures as low as -20F (-29C) and is resistant to ozone, oxidation, and most chemicals and petrochemicals.
- Maintenance free, no drying required, and is easily cleaned.
- In various diameters up to 3.5” and in typical coupled lengths of 50’ or 100’ and can be specified in continuous lengths up to 660’ coupled.

XH AG SUPPLY HOSE

LAYFLAT NITRILE RUBBER

The Slurry Hose is manufactured out of 100% high tenacity yarn, extruded thru-the-weave nitrile rubber construction. This means a hose manufactured to be durable and resistant to chemicals, ozone, abrasion, and puncture. This Slurry Hose is also manufactured to have a wide temperature range.

This hose is designed to move slurry quickly and efficiently all while giving you the reliability you require to get the job done.

FEATURES AND BENEFITS

- 100% high tenacity yarn, extruded with thru-the-weave nitrile rubber construction.
- Nitrile rubber cover increases resistance to oil, fuel, most chemicals and petrochemicals.
- Nitrile rubber cover resistant to ozone and oxidation.
- Ideal for slurry supply lines and irrigation applications.
- Nitrile rubber cover greatly increases abrasion resistance.
- Tightly woven polyester reinforcement resists punctures.
- Temperature range -5°F (-20°C) to 200°F (95°C).
- Designed for maximum durability, flexibility, and service life.
- Easy to store and transport.

CONSTRUCTION

Engineered for long-lasting performance in the field, Snap-tite Hose’s AG feeder hose features an exclusive thru-the-weave liner and nitrile rubber construction, making this rugged hose incredibly durable, with superior abrasion and puncture resistance — which is critically important for main feeder line functionality. Its rubber composition keeps AG light enough for easy deployment and retraction, making it the go-to hose for tackling demanding agricultural applications.

**FEATURES AND BENEFITS**

- Nitrile rubber cover increases resistance to oil, fuel, most chemicals and petrochemicals; and stands up to ozone and oxidation.
- Built with 100% high tenacity yarn, extruded with thru-the-weave nitrile rubber construction for strength and greater flow.
- Lightweight allows for fast deployment and retrieval, saving time and money.
- Rubber construction delivers maximum durability, flexibility and service life.
- Performance rated at -5°F to 200°F (-20°C to 93°C).
- Made in the USA to ISO-9001:2015 certified quality management system.

Our 8D hose is an industrial grade double jacket hose with a lightweight EPDM rubber liner. The outside jacket utilizes a tight weave that is less likely to “catch” while dragging through a worksite and also helps to reduce kinking at low pressures, keeping the flow constant. 8D also has a wide temperature range and is capable of being used at a mine in Alaska or a construction site in Arizona.

**FEATURES AND BENEFITS**

- Double jacket, rubber lined municipal fire hose made from 100% high tensile strength polyester yarn with a lining of extruded EPDM.

- Optional Dura-Cote treatment greatly increases abrasion, heat, flame and petrochemical resistance while virtually eliminating water pick-up. When treated, 8D is protected from mildew and no drying is required.

- Hose remains flexible to temperatures as low as -40F (-40C) and is highly resistant to ozone and oxidation.

- Kink resistance exceeds that of lightweight jacketed hose.

**CONSTRUCTION**
Polyester double jacket EPDM

8T LIGHTWEIGHT POLYESTER DOUBLE JACKET HOSE

Our 8T has the same jacket construction as an 8D in that it is made with two jackets of tightly woven polyester but is lined with polyurethane which is lighter and packs tighter than 8D. The polyurethane liner material meets NSF Standard 61 for potable water use and can be used as a hydrant or water main bypass in an emergency situation.

FEATURES AND BENEFITS

- High quality, double jacket, municipal fire hose made from 100% high tensile strength polyester yarn along with a lining of thermoplastic polyurethane for reduced weight while remaining kink resistant.
- Reverse twill weave of the inner jacket provides a smooth waterway and superior lining adhesion, superceded only by Ponn Conquest.
- Remains flexible to temperatures as low as -20F (-29C) and is resistant to ozone, oxidation, and most chemicals and petrochemicals.
- Polyurethane lining material meets National Sanitation Foundation (NSF) Standard 61 for drinking water.

Our 6D hose is designed almost identically to our type 8D hose but for lower operating pressures at 300 PSI (2070 kPa) maximum. When the pressures are lower and the economics demand consideration, this double jacketed, rubber lined hose can’t be beat. As an added benefit, most sizes of type 6D are UL listed, some are ULC (UL Canada) listed or FM approved and can be labeled if required.

**FEATURES AND BENEFITS**

- Exceptional quality, double jacket, rubber lined municipal fire hose made from 100% high tensile strength polyester yarn with a lining of extruded EPDM.
- Optional Dura-Cote treatment greatly increases abrasion, heat, flame and petrochemical resistance while virtually eliminating water pick-up. When treated, 6D is protected from mildew and no drying time is required.
- Remains flexible to temperatures as low as -40°F (-40°C) and is resistant to ozone and oxidation.

8M

POLYESTER DOUBLE JACKET HOSE

8M mine hose is a premium quality rubber lined, double jacket hose that is MSHA (Mine Safety & Health Administration) approved (USMSHA No. 2G-15/1) for the rugged demands of underground fire fighting.

A high quality polyester reinforced outer jacket protects an inner polyester jacket and rubber liners from wear and puncture while also helping to prevent kinking that limits flow. The all polyester double jacket construction provides maximum cut and abrasion resistance and is ideally suited for mining operations.

CONSTRUCTION
Polyester Double Jacket Rubber Line with Rubber Backing

TEMPERATURE
-5°F to 150°F (-20°C to 65°C)

The DJ800 double jacket EPDM rubber lined fire hose is a lightweight fire hose that is ready to do it all.

This hose can be used as a municipal attack and supply line, a relay pumping/rural water supply, can be used for industrial fire fighting environments, master stream appliances, and crash/fire rescues. The tightly woven fabric allows for flat folding while also being resistant to abrasion and kinks.

ATTACK LITE POLY

DOUBLE JACKET POLYESTER ULTRA LIGHTWEIGHT TPU LINED HOSE

The Attack Lite Poly is a great choice for industrial firefighting. This hose is lightweight and space saving - it requires less space than a standard double jacket or rubber hose. The tightly woven fabric and optimized liner thickness ensures this hose folds flat and tight in any space you need it to.

This hose can be used for industrial and municipal fire fighting, master stream appliances, all cold weather applications, and relay pumping for rural water supply.

This lightweight hose is trusted by people everywhere because it’s lightweight which allows for easier handling.

WOVEN DOUBLE JACKET

DJ600 LDH

DOUBLE JACKET EPDM RUBBER LINED LARGE DIAMETER HOSE

DJ600 is the double jacket EPDM rubber lined large diameter hose that is excellent for both attack or supply lines.

This large diameter hose is lightweight and folds compactly for space saving. Since it’s lightweight by design, it’s easier to handle therefore reducing firefighter fatigue. With this hose you can flow high volumes of water quickly while avoiding the fatigue that comes with heavier hoses.

The Firequip DJ600 LDH hose is a tough and able fighter - this hose moves water quicker, has high abrasion resistance when treated with WearGuard as well has low friction loss. If you are looking for a LDH to flow water, look no further than the DJ600 LDH.

Some uses include:
- Municipal attack line hose.
- Relay pumping.
- Crash/fire rescue.
- Master stream applications.
- Industrial firefighting.
- Soft suction in shorter lengths.

As per NFPA 1961 - The service test pressure is to be 10% greater than the “normal highest operating pressure” at which the hose is expected to be used.
5M mine hose is a premium quality rubber lined, single jacket hose that has been MSHA approved (USMSHA No. 2G-15/1). A high quality polyester outer jacket protects an inner jacket rubber liner from wear and puncture while also helping to prevent kinking that limits flow.

3P, 5P, 6P
RUGGED, LIGHTWEIGHT HOSES FOR EVERY APPLICATION

3P: POLYESTER SINGLE JACKET HOSE
The industry's featherweight champion, 3P is rugged, lightweight, strong and extremely flexible. The low pressure hose is designed for exterior and interior fire protection: 3P is an economical single jacket industrial hose made from high-strength polyester along with an Ethylene Propylene Diene Monomer (EPDM) rubber liner. A tighter weave improves the operating pressure to 150 psi (1035 kPa), yet it packs tightly and is very lightweight, making it incredibly service worthy.

5P: POLYESTER SINGLE JACKET HOSE
The super-duty 5P is an excellent all-around performer: Strong, flexible, and ideally suited for all exterior and interior firefighting applications, it delivers medium pressure and high-end performance at a value price point. 5P is a polyester single jacket hose with a rugged Ethylene Propylene Diene Monomer (EPDM) rubber liner that can handle most fluids including some chemicals and petroleum-based products. It boasts a maximum operating pressure of 225 psi (1550 kPa) and can be enhanced with optional Dura-Cote treatment for a higher level of abrasion resistance while preventing water pick-up.

6P: POLYESTER SINGLE JACKET HOSE
When the going gets tough, the tough choose 6P. Ozone-proof, heavy-gauge hose for hump racks and reels - anywhere double jacket hose will not work, 6P hose is the high pressure hose with enough muscle for industrial firefighting applications. The polyester single jacket construction and Ethylene Propylene Diene Monomer (EPDM) rubber liner are tough enough to accommodate chemicals and petroleum-based products, and has an operating pressure of 275 psi (1895 kPa). When treated with optional Dura-Cote treatment, 6P gains added heat and abrasion resistance and longer service life.

REEL LITE BOOSTER HOSE

LIGHTWEIGHT WOVEN TPU FORESTRY REEL HOSE
Swift-moving forest fires require quick action—and Reel Lite delivers. It is light in weight and strong in stature, for first arrival frontline attack duties. Fully loaded, ready on the reel, this forestry hose is purpose-built for wildland use: Reinforced with a 100% high tenacity polyester cover for exceptional durability and low drag; and a smooth TPU liner—it goes wherever you need it, with complete confidence. Available in 50' or 100' lengths, Reel Lite is available with expansion ring or field repairable couplings.

FEATURES AND BENEFITS
• Polyester single jacket hose with ultra-durable outer cover, circular woven with helical inner reinforcement.
• Built tough for rugged dependability, but at a light weight for exceptional portability.
• Jacket design delivers low drag for exceptional service for grass and brush, wildland, and dumpster fires.
• Polyurethane liner is lightweight and flexible.
• Fully loaded, ready on reel.
• Recommended reel size 12” minimum.
• One year warranty.

RACK & REEL

SINGLE JACKET
INDUSTRIAL FIRE HOSE

All polyester single jacket fire hose specifically designed for interior fire fighting use, pin racks and/or fire cabinets in buildings and manufacturing facilities, primarily for first response usage by occupant/employee trained fire brigades.

Compliant with NFPA Standards 1961 for manufacturing and assembly under ISO 9001:2015 quality certification. The use of lightweight polyester yarn and thermo-polyurethane elastomer for this specific fire hose is designed to increase packing ability for interior firefighting applications, ready-to-use first responses.

FEATURES AND BENEFITS

- All synthetic polyester standpipe hose with warp and filler yarns consisting of 100% spun polyester yarn. Ideal for interior first response firefighting by trained occupants/employees.

- Single-ply extruded thermo-polyurethane liner designed to provide superior flexibility, packability for small storage spaces, standpipes, pin racks, or fire cabinets.

- Vulcanization of polyurethane liner to polyester jacket under steam pressure assures curing that protects against delamination of the liner from the outer jacket.

CONSTRUCTION

100% spun polyester shall be used for both warp and weft yarns to reduce weight and increase flexibility.

STANDARD LENGTH/WORKING PRESSURE

Stock standard lengths: 50’, 75’, and 100’. Each length is pre-folded for ease of installation. Working pressure is 250 psi while hose is hydrostatically tested by manufacturer at 500 PSI.

COUPLINGS

Brass NST couplings are standard on all lengths.

COLORS

- Pre-folded for easier pin rack installation.

- Standard lengths: 50’, 75’, 100’ with standard brass NST couplings.

- Warranty for materials and workmanship is one year for repair or replacement of hose.

MAXI-FLEX PVC

LIGHT AND FLEXIBLE HARD SUCTION HOSE

The original PVC Lightweight Suction Hose provides flexibility, visibility through PVC smooth flow tube encapsulated in a durable, tough PVC helix that enables flexing while providing superior abrasion protection. Black helix ribs protect hose from UV effects.

Made specifically for drafting applications, it is light enough for one-man assembly of drafting from any rural or municipal non-pressurized water source to supply pumper. For suction only, not for hydrant use. Hose suction is tested to NFPA Standard 1961 compliance to ensure consistent vacuum for uninterrupted drafting. Small diameter up to 3” coupled with expansion ring couplings; 4” and above coupled with two piece aluminum locking collar with four bolts for proper vacuum seal. Five-year warranty. Custom cut lengths up to 20’, Standard length 10’.

Available in 1 1/2” and 2” sizes. Coupling available in Rocker Lug, Long Handle and Folding Handles female ends.

FEATURES AND BENEFITS

• Ultra flexible and lightweight, one-man hook-up operation if necessary.
• Time saving with less manpower required compared to conventional suction hose.
• No plastic couplings.

**TANK-FLEX**

**CONVENTIONAL HARD RUBBER WIRE REINFORCED SUCTION HOSE**

Traditional hard suction hose constructed with smooth cover and inner liner synthetic EPDM rubber. The EPDM liner is reinforced with nylon woven jacket with special wire helix for strength and pressure usage. Manufactured with soft cuff end for improved coupling retention. Made with smooth cover and inner liner for reduced friction loss. Designed for rural fire departments for ease of handling and drafting of water to pumper. Tough, durable, can withstand pressure if required up to 165 psi. Designed for full vacuum drafting, ozone resistant, and meets or exceeds NFPA Standards 1961. Standard length limited to 10'.

Aluminum hardcoated couplings with expansion ring with a choice of Long Handle or Rocker Lug Female coupling. Five year warranty.

**FEATURES AND BENEFITS**

- Wire reinforced liner and smooth ozone-resistant cover. Can withstand pressure, if required.
- Easy to transport and more flexible than traditional hard suction hoses for fast hookup.
- Constructed with soft cuff ends for greater coupling retention.
- Designed for full vacuum. Suitable for hard suction applications, drafting from rural water sources.

BOOSTER

FIRE ENGINE BOOSTER HOSE
Reeled and ready for duty, Fire Engine Booster is rugged, reliable, and the hose choice for knocking down fires with confidence.

The multiple textile braids reinforced red reel hose features a specially compounded Ethylene Propylene Diene Monomer (EPDM) tough cover that resists abrasion and weathering. Inside, a smooth black synthetic EPDM rubber inner tube adds flexibility and sure, high-power flow.

When pressurized, a poorly constructed hose may contract or elongate. This can endanger a firefighters in a high place or a tight spot. It can also damage equipment such as hose reels which can actually be crushed. Firequip Booster Hose is made with precision reinforcement angles to control length change under pressure to avoid these problems. The durable, bright red cover both looks great and last longer for overall better cost effectiveness and reliability. The cover is made of EPDM rubber, which resists abrasion, gouging ultra-violet, ozone aging and heat.

FEATURES AND BENEFITS
• High-Performance: Nitrile rubber fire hose reinforced with high tensile multiple braid yarn, and smooth inner lining for exceptional strength, durability and flow.
• Ultra-Tough: Special EPDM rubber compound provides a durable, flexible cover that resists abrasion, gouging, ultra-violet, ozone and most chemicals.
• Flexible: Smooth outer cover lowers drag resistance.
• Service-Ready: Fully loaded, ready on reel.

CONSTRUCTION
EPDM Lined Rubber Hose

STANDARD LENGTH/ WORKING PRESSURE
Stock standard lengths: 50’, 100’, 150’ and 200’. Each length is pre-folded for ease of installation. Working pressure is 800 psi while hose is hydrostatically tested by manufacturer at 1600 psi on 3/4” and 1”.

COUPLINGS
Barway couplings in Hard Coat Aluminum, Chrome Plated Brass and Brass in 3/4” and 1” sizes; permanent crimped swage couplings on 1-1/2” only.

• Versatile: A multi-purpose frontline attack hose expertly handles structure and vehicle firefighting; grass, wildland and forestry fires; and industrial applications.
• Reliable: 4:1 safety factor (1” and 3/4” only- 1-1/2” has a 3:1 safety factor).
Our Type 187 forestry hose is a lightweight, all-synthetic fire hose with a polyurethane lining inside a polyester jacket designed to meet the USDA Forest Service Specification 5100-187 for “Synthetic Lined” fire hose. Available in two styles - 7F and 8F.

Style 7F is ideal for traditional Type I specifications while 8F meets the new Type II specification and is protected from mildew and no drying is required. Type 187 8F is also available with our Dura-Cote™ treatment, greatly increasing abrasion, heat and flame resistance while virtually eliminating water pickup.

Strong, portable and lightweight for easy transport, 7F is the dependable, all-synthetic fire hose with a polyurethane lining inside a polyester jacket that meets the USDA Forest Service Specification 5100-187 for Synthetic Lined fire hose. It is ideal for traditional Type 1 specifications. Available in 50’ or 100’ lengths, 7F includes aluminum rocker lug or 1/4 turn forestry couplings.

Super tough, high performance, and lightweight means this hose is ready for anything.

**FH**

**SINGLE JACKET POLYURETHANE LINED HOSE**

Wildland Ultra Forestry, or FH, is designed to be carried by backpack or by hand for long distances over steep or rough terrain and forest conditions.

With grab-and-go portability and reliable performance, the FH hose is the hose you want on your truck for quick response - ideal for knocking down hot spots. A small diameter, lightweight, compact single jacket hose, FH uses standard 3/4” brass garden hose thread (GHT) fittings and delivers a working pressure of 150 psi (1035 kPa). With 50’ of FH weighing only 1.25 pounds with a coil diameter of around 9’, it can be taken almost anywhere.

**FEATURES AND BENEFITS**

- Durable: Polyester single jacket polyurethane lined liner matches lightweight with rugged dependability.
- Reliable: Performs in temperatures from -40°F to 150°F (-40°C to 65°C).
- Portable: Incredibly lightweight at 1.25 pounds - and 9” coil diameter - make FH the go-anywhere hose that won’t slow you down.
- Specification 187, meets USDA FSS 5100-187 Type II.
- The FH hose is available in 3/4” and 5/8” with garden hose threads.
- Applications include: brush, grass, and forestry fire.
- Designed for use with portable pumps, heavy duty pumps, and tank trucks, and wildland applications.
- Untreated white available - 187 Type I.

OUR VISION

EXPANDING OUR HOSE PRODUCTS IN ORDER TO SERVICE OUR CUSTOMERS BETTER –
A MESSAGE FROM OUR CEO

Snap-tite Hose is entering a new phase in its development by going back to its roots as Snap-tite Hose. The company logo and name changes make it easier to show customers our entire product portfolio and how we truly have a solution for your hose flow issue. We’ve also welcomed a new brand to our family and are excited at the possibility of helping even more customers around the globe.

• By combining forces with Firequip, we are able to offer a broader range of high quality, durable lay-flat hoses to more customers. We want to make sure that our customers understand what each brand stands for and why a mix of brands enables us to provide the most complete, tailored hose system solution for nearly any set of customer needs.

• We recognize that all customers are not alike – urban departments have different needs than rural stations; private industrial fire suppression poses different challenges than typical residential structures. High-rise structures require different equipment that single-story structures. One hose does not and should not fit every department’s standard operating procedures for pressure and flow. The expansion of hose products offered gives us more choices to offer to customers to more closely meet their needs.

• The iconic brands of Ponn, National and Snap-tite have always and will always be made in the USA from the highest quality materials in ISO-2015 certified facilities. Every hose is tested and certified to meet or exceed NFPA standards. We maintain a database of every test to ensure complete traceability from the factory to dealer to end-user through the entire life cycle of the hose. This is what you should expect from the industry leader.

• The Firequip brands give us access to high quality hoses that are globally sourced for durability and value. When departments rely on a hose that can offer price, quality and durability the Firequip by Snap-tite brand is there to provide solutions to their hose flow needs. We stand behind every hose that is assembled in our plant in North Carolina and test each hose to ensure that it meets or exceeds NFPA standards. The Firequip history of high quality and exceptional customer service adds to our overall ability to service customers better and we are excited to welcome them to the family.

• We stand for honesty and integrity in dealing with customers, employees, suppliers and other stakeholders. That’s why we have invested in test equipment and demo trucks to demonstrate scientifically in the lab and professionally in the field why our products are the best in the business. We know you don’t want to hear excuses if something goes wrong, and we won’t hide behind some technicality in our search for the root cause of whatever happened. We take corrective action when necessary to ensure that our ISO 2015 processes and procedures will deliver quality and value each and every time we ship a hose - after all, our first responders depend on their tools to keep them safe and we take our part in that promise very seriously.

I invite you to take a closer look at the new (old) Snap-tite Hose through our catalogues, our web site and our sales and customer service representatives. Our sales team is ready to help you find the solution to your hose flow issue. If it’s price, performance, durability, innovation, or legacy - we’ve got you covered.

INNOVATIVE. HONEST.
MANUFACTURED WITH YOU IN MIND.
DURA-COTE™ HOSE TREATMENT

EXCLUSIVE COATING TO CREATE A MORE DURABLE HOSE
Snap-tite Hose’s Exclusive Dura-Cote™ hose treatment creates a virtually impenetrable shield that increases hose performance and durability, while extending service life. Dura-Cote™ is an Advanced Acrylic Urethane Hybrid material that is force applied—not sprayed—and cross-linked via a high temperature curing process. Protective Dura-Cote™ provides superior abrasion, heat and chemical resistance, far surpassing the minimal standards of MIL-H24606B. Compared to competitive coatings made of nitrile/latex or acrylic, Advanced Acrylic Urethane Hybrid has remarkably better flexibility and ultra-low temperature maneuverability.

- Abrasion resistance increased 10 times over uncoated hose
- Flame resistance increased five times
- Resistant to solvents, oils and other hydrocarbons
- Excellent water pick-up resistance
- Immune to fungal damage
- UV and ozone resistant

COUPLINGS

STYLE S STORZ LDH COUPLING
Lightweight aluminum extruded from bar stock, hard-coated to prevent corrosion and abrasion. Self-locking, 3-part collars design ensures better coupling retention and reduces hang-up when laying hose in the field.

3-LUG ALUMINUM ROCKER LUG COUPLING
Typical coupling supplied with Municipal and Industrial Hose. Twice as strong as brass and only one-third the weight. Hard-coated for extra wear resistance and helps prevent damage to swivel and threads. Three lugs on both male and female swivel. Expansion ring type.

OPTION STYLE TYPE BR, BP
(BRASS ROCKER LUG OR PIN LUG COUPLING)
Basic two lug coupling that doesn’t snag and rolls easily in use. Cast brass designed for heavy duty industrial fire hose applications where corrosion is a concern. Brushed brass finish. Expansion ring type.
Snap-tite Hose and Firequip by Snap-tite Hose features a full-line of hose products serving the industrial, manufacturing, municipal fire, military, mining, forestry, agriculture, construction, nuclear, dewatering segments as well as oil and gas fracking water transfer hose. Snap-tite Hose continues to be recognized as an industry leader globally, innovative, and committed to developing mutually beneficial relations with its valued network of industrial distributors.

Snap-tite Hose has been a proud, long-standing member of NAHAD, serving the network of industrial distributor members for many years.

We will continue to utilize the NAHAD programs, services, education, and events that will enable us to consistently provide the highest quality hose products to meet NAHAD standards and the expectations of its membership.

The association services provided are valued as a means to an end to meet the dynamic and changing needs of the industry while fostering a sense of partnership and stronger working relationships between distributors and manufacturers.

It’s important to us to show our customers we are committed to manufacturing hose products to the highest standard and joining organizations that hold manufacturers to the highest standards as well. This ensures the products we manufacture and ship are ready to aid our customers in doing their job effectively and efficiently.

We value the access to industry leading safety standards and other resources to keep us informed and educated to the latest insights, ideas, and information. We stand prepared to work with the staff of NAHAD to promote the values of its membership.

Snap-tite Hose warrants that it will replace products sold that contain defects in materials or workmanship for a period of one year after receipt of shipment.

All product returns must be authorized by Snap-tite Hose in advance and returned to the factory within 15 days after said authorization with any and all transportation charges pre-paid.

Warning: Failure or improper selection or improper use of the products and/or systems described herein or related items can cause death, personal injury and/or property damage. This document and other information from Snap-tite Hose, its subsidiaries and authorized distributors, provides product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog. Due to the variety of operation conditions and applications for those products and systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met. The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Snap-tite Hose and its subsidiaries at any time without notice.
